

Regarding the NAB's petition 04-160 opposition to satellite radio delivering local programming.
The local programming that, in my case XM Radio, is offering is unique, and is not available locally. There is no local broadcast 24 x 7 traffic and weather available in the Dallas market.

If the NAB is concerned about this type of service, I would suggest that a terrestrially based broadcaster begin to offer a better service that would draw listeners away from their Satellite radios.

If this increased competition for listeners will improve what's available on local broadcasts, I think the whole public will benefit.

I don't want to pay \$10 per month if I don't have to in order to get the kind of programming I like.

This situation is capitalism at it's best. XM Radio has a better product. They should reap the rewards for offering a better product.

I hereby respectfully urge the FCC to reject the NAB's petition 04-160.

Sincerely,

Robert Naumann
